### **Abstract**

Though it was social and civic responsibility of the people to deliver children, nurturing them ,educating them and developing them in society, quality of children's in family determines their maturity and quantity of children in a family determines their curiosity on delivering children .From this aspects both government and individuals have to examine and understand country's future as well as individuals secured and happy life, both government and Individual life should not be spoiled and made unhappy owing to having outnumbered populations .It is a pure responsibility of the Individuals to control their more children delivering habits with an aim to live happily in future and should not make burden on same people by making more children ,though people are not following this good ideas the government have to make strict law to stop population growth from stopping individual's habits on children delivering .For the effective and effervescent social development, government and individuals have to have moral responsibility to stop population growth.

**Keywords:** Morality, Self Control, Government Role, Individual Role, Social Development

### **Introduction**

In several issues of India's since its independency population growth and developments are one of the oldest issues in social science domains, this issues are already quoted and mentioned clearly by Robert Malthus) on his famous essay and work population in 19798 has argued that population growth is unavoidable and inevitable part of society which will lead to make poverty. In over populated country, shall able to feed and keep the always at poor and poverty situations (people life would be demarcated within the subsistence level beyond this nothing they could expect).Over population hopefully would be useful during the wartime with other country where manpower would be used after that people would be found so poor because country will able to use over population in war instead of keeping them at luxury life.

This issues are so pertinent to all the countries for discuss about pros and cons of the population development, population growth will be impinging on a country's development both positively and negatively ,from then to now there is consensus and concerns in developing countries that fertility rates are directly affecting the country social ,economic and political developments ,according surplus population growth a country could able to give food ,shelter ,needs ,necessities ,education and basic amenities unless there will prevail confusion, turmoil, dilemma ,violence ,dacoits problems and financial crises. So, population must be according a country's natural resources and territory.

Development influences population growth and population growth influences the country developments, everything must within the pure and true limitation was given by god in ancient time before humanity come to soil. Problems and perplexity, starvation, famine and war will come in a country when it does not follow this basic god and population doctrines.

Development of population rate in society grows steadily for a long period in social history ,when there is mortality arte according to the fertility rate there would not be living crisis in civil society if so both development will go together ,with this factors policy makers are needed to strengthen their containment policy periodically .delivering number of children in a country will lead show that it is a biggest populate country ,for which it hast to have accommodative space ,place, facilities, opportunity and fundament needs unless image of populated country would be converted into purposeless country. Though government did not pay attention on controlling population growth the well aware citizens have to understand that it may be 90 percent positive and purposeful for the vote bank but the same citizens have to understand their family revenue and income situations to come ahead for stop delivering more children ,if every country's citizens do this activities politicians expectations would be fruitless and their vote banking interest would be disguised and cheated and parents aim or citizens aim on controlling population growth would be accomplished .Though purpose of ruling politicians are at increasing population to overcome and override their interest urban people have to go to village places for make an awareness about populations explosion's affects on common people then they will stop child delivering habits ,they may have one or two more than two children in each family is harmful not to country and for their family.

maximum mortality rate will determines on preserving even and proportion population developments once it get failure abnormal population growth will take place in a country as it to invade and engulf entire country developments ,owing to too much populations following disease are likelihood toward spoil people peace such as famine, epidemics, contagious, unhygienic and less health developments ,to control these disease even government shall not do any think owing need big burden and it will pay very less attentions on saving people. Citizens in all the countries must be made awareness this intentional activities of the government on not controlling population growth and developments ,so they are needed go through society, politics and politician's activities ,according their study they have to stop much delivering habits in all the society of both the develop d and developing countries.

Since mortality rate is declined in some of developed and developing countries the birth rate of children are fast increasing just like flood water mixing into a sea ,by which people in all the society have been suffering huge and lot due to not getting their basic fundamental needs and freedom. Since advanced medication system was introduced by developing and developed country's medical and research experts the mortality rates has been decreased and postponed, in postponed time number of children are delivered it means birth rate is increasing in mid period of mortality is postponed by medical inventions.

Due to technological and computer modernization and revolution mortality rates are declined and reduced for instance actual death rate of person is postponed and delayed at 5to 7 years distance and back, thereby population growth is uncontrollable phenomena in all the country, every person want to live at any cost though he or she is aged and moribund because it is a psychological attributions of the characters ,for which they spend money for hospital, health checkup and insurance .Due to above these health maintaining and life protecting concerns of the citizens in all the countries the death rate is declined .In congested country HIV and illegal relations, food scarcity, infected situations, unhygienic situations, poor equality education, less career opportunities and other so many inconvenient problems are happening each day in all the country's civil society.

Owing to malnutrition and bad health problems in many of developing countries females are passed away while they deliver child ,some time both will die, these problems are happening owing more populations, government inability to take care on its people health, spend money for

their good health preservation an careless society people. In present days as citizens we have to born and die so carefully without expecting government help and care, because they live in the society for vote bank by population explosions and we born for enjoy our freedom by having limited populations.

The result derived from two assumptions in their model: one was that the burden of dependency, the ratio of non-workers to workers in the population, was greater under high fertility and led to reduced savings; and the other was that investment had to be spread over larger numbers instead of raising the amount of physical or social capital per worker. This was called ‘capital widening versus capital deepening’; that is, if the population were growing more slowly, the same amount of capital would be used to improve the quality of schooling or health services received by each individual, instead of being diluted by having to extend coverage to more people; or else there would be more or better capital for each worker in the workplace.

Population growth is boosting a country’s economic growth in macroeconomic aspects by which GDP of country is increasing lot, additionally military capacity and manpower capacity would be increased much but their needs would be minimized lot they should live lastly as a poor and needs searcher without getting permanent solution for live as a whole human in the society. Population growth in certain aspects will be helpful for country’s economic growth and also useful for military purpose, in people freedom way there is not any happy due to over populations. Concern has to arise from the citizen’s side instead of arising government side because citizens have to live and government had to rule on cheating way.

Research in these fields in past two decade has brought very poor results because they could not mention and predict as this study is predicted and mentioned about the promoter of population explosion. Government is ruling and ruining its people by getting their income and revenue and finally says not fiancé to do service for people. Most resource of over population is taken by the rulers for their future good life and relations good life, it is not yet known to any citizens clearly to stop their voting to this cheating government .More weight of more population is for society not for government,it emerged to levy weight on people head and people born to support its weight so people must be careful on their life and future issues without leaning government service and help.

On account of too much population administrators are not able pay attentions on peoples health, education and civic life because they are not interested about population growth and burdens on the soil .chief duty of government is to collect revenue and device ant people polices with an intention to sustain their power on poor people and people income rather than worrying about it country future and dreams. Over population is always being as major source of government revenue generation whereas same population is so much disturbed in social political and economical and cultural aspects. Argument here is indicating that too much population is weight and problem to its same people in enjoying freedom and liberty, at any cost not loss for its country these ideas must be understood by all the citizens.

Exact population will fetch minimum constitution said liberty, freedom, luxury life, sophisticated life, basic amenities and privileges’ ,while it has population more than exact and actual it suffers and nervous to do this facilities owing its briefed economic policy, thereby people are affecting always in terms of all their basic needs ,their needs are distributed to over populations then needs of actual people would be unenough and less .Population control will pave way for enjoy a men an ultimate freedom and liberty without stop and gap.

When a government distributes 100 person’s basic privileges’ to 500 peoples the needs and necessities of the 100 people are being insufficient and becomes scarcity by people will be roaming here and there searching food and place finally they could not live in the society without career opportunity .This situations of the people makes the poverty word .It is outcome of men or family’s hardships ,inability and impossibility to collect their needs either from government or same fellow this situations called as an absolute poverty. Here role of people is important to comprehend and listen about the crucial tragedy of the government carelessness and disinterest on controlling of population explosions.

### **Urban Differences**

As we all understood an spoken about urban population would be educated and well aware about family and environments, this reason is 100 percentage confirm because their maturity, understanding, concern on family running and conducting could be able understood by seeing and valuing their number of children in each households. It shows good concerns on their liberty, future, career, environment and how to life with limited children, they got this awareness

through their education in urban areas, makes them to know their fiancé problem, issues of country, administration and management thereby they are living with planned policy and ideology which they show in limited child delivering and rearing according to their income and revenue.

### **Rural background**

This background is totally reverse and against to urban development because in rural area people will do much agriculture hard work for get relive from those hard work farmers will have frequent intercourse in all agricultural family without bothering their future and children's future. This habits are making part of population development and explosions .reason for which is ,they don't have entertainment chance, amusement chance, tour chance and so on: these monotonous situations of them make them to pay attention on childe making .For counter their so long enemy in villages parents are used to pay attention on making more children with aim to make strong their family from the vulnerable situations .Though there are yet unseen factors of populations growth but these ideas are recognized and seen one by each one of us .Altogether population growth is being part of in society due to village people like to have more children for their safety and income when the parents are getting aged ,delivering too much children would be supportive to their family is thought of majority farmers in Indian soil.

### **Conclusion**

Unless citizen should understand about same citizens life difficulties, hardship, unable to by desired things ,enjoy their freedoms and liberty owing to their needs scarcity ,the population explosions should not be controlled .To get stopped population growth citizens have to apply their rational thinking on looking other's pain and difficulties in civil society ,this understanding of same human being would make and teach in each family to deliver limited children for avoid those feelings and hardships of same fellow being owing to population growth. Government is to rule and collect revenue from people but people are to enjoy their life through their hard earning, in controlling of population growth people have to come forward rather than government because government is a lazy institution is to exploit people revenue by seeing their sorrow and sadness.
